

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**LISTING OF CLAIMS**

1. (Previously Presented) A method for providing feedback, said method comprising the steps of:
  - a) forwarding a query pertaining to a structured entity having a plurality of parts;
  - b) forwarding a plurality of response templates for answering the query; and
  - c) receiving a response from a first client device, wherein said response comprises a completed response template linking one or more of said plurality of parts of said structured entity, the completed response template being selected from among the plurality of response templates by a user of the first client device.
2. (Previously Presented) The method of claim 1, further comprising the step of:
  - d) receiving a response from a second client device, wherein said response comprises a completed response template linking a plurality of parts of said structured entity.
3. (Original) The method of claim 2, further comprising the step of:
  - e) aggregating said responses from said first and second client devices to produce an aggregated result.
4. (Original) The method of claim 3, further comprising the step of:
  - f) forwarding said aggregated result to said first client device or said second client device.
5. (Original) The method of claim 2, further comprising the step of:
  - e) forwarding said response of said first client device to said second client

device.

6. (Original) The method of claim 1, wherein said structured entity comprises a sequential multi-step process.

7. (Original) The method of claim 1, wherein said structured entity comprises a literary work or a portion of a literary work.

8. (Original) The method of claim 7, wherein said literary work is a poem.

9. (Original) The method of claim 1, wherein said structured entity comprises a computer program.

10. (Original) The method of claim 1, wherein said structured entity comprises a musical composition.

11. (Original) The method of claim 1, wherein said structured entity comprises a biological organism.

12. (Original) The method of claim 1, wherein said structured entity comprises a computer data structure.

13. (Original) The method of claim 1, wherein said structured entity comprises an architectural structure.

14. (Original) The method of claim 1, wherein said structured entity comprises a chemical process.

15. (Original) The method of claim 1, wherein said response contains an input entered by using said first client device.

16. (Original) The method of claim 15, wherein said input comprises filling in said at least one response template.

17. (Original) The method of claim 15, wherein said input comprises linking said at least one response template to at least one part of said structured entity.

18. - 19. (Cancelled)

20. (Original) The method of claim 1, wherein said input comprises at least one tag.

21. (Previously Presented) A method for providing feedback, said method comprising the steps of:

- a) receiving a query pertaining to a structured entity having a plurality of parts;
- b) receiving a plurality of response templates for answering the query; and
- c) providing a response to an aggregating device from a first client device, wherein said response comprises a completed response template linking one or more of said plurality of parts of said structured entity, the completed response template being selected from among the plurality of response templates by a user providing the response.

22. (Previously Presented) The method of claim 21, further comprising the step of:

- d) providing a response to the aggregating device from a second client device, wherein said response comprises a completed response template linking a plurality of parts of said structured entity.

23. (Original) The method of claim 22, further comprising the step of:

- e) requesting for an aggregated result of said responses from said first and second client devices.

24. (Original) The method of claim 23, further comprising the step of:  
f) receiving said aggregated result.
25. (Original) The method of claim 22, further comprising the step of:  
f) receiving said response of said first client device by said second client device.
26. (Original) The method of claim 21, wherein said structured entity comprises a sequential multi-step process.
27. (Original) The method of claim 21, wherein said structured entity comprises a literary work or a portion of a literary work.
28. (Original) The method of claim 27, wherein said literary work is a poem.
29. (Original) The method of claim 21, wherein said structured entity comprises a computer program.
30. (Original) The method of claim 21, wherein said structured entity comprises a musical composition.
31. (Original) The method of claim 21, wherein said structured entity comprises a biological organism.
32. (Original) The method of claim 21, wherein said structured entity comprises a computer data structure.
33. (Original) The method of claim 21, wherein said structured entity comprises an architectural structure.
34. (Original) The method of claim 21, wherein said structured entity comprises a

chemical process.

35. (Currently Amended) A non-transitory computer-readable medium having stored thereon a plurality of instructions, the plurality of instructions including instructions which, when executed by a processor, cause the processor to perform the steps comprising of:

- a) forwarding a query pertaining to a structured entity having a plurality of parts;
- b) forwarding a plurality of response templates for answering the query; and
- c) receiving a response from a first client device, wherein said response comprises a completed response template linking one or more of said plurality of parts of said structured entity, the completed response template being selected from among the plurality of response templates by a user of the first client device.

36. (Currently Amended) The non-transitory computer-readable medium of claim 35, further comprising the step of:

- d) receiving a response from a second client device, wherein said response comprises a completed response template linking a plurality of parts of said structured entity.

37. (Currently Amended) The non-transitory computer-readable medium of claim 36, further comprising the step of:

- e) aggregating said responses from said first and second client devices to produce an aggregated result.

38. (Currently Amended) The non-transitory computer-readable medium of claim 37, further comprising the step of:

- f) forwarding said aggregated result to said first client device or said second client device.

39. (Currently Amended) The non-transitory computer-readable medium of claim 36,

further comprising the step of:

e) forwarding said response of said first client device to said second client device.

40. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said structured entity comprises a sequential multi-step process.

41. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said structured entity comprises a literary work or a portion of a literary work.

42. (Currently Amended) The non-transitory computer-readable medium of claim 41, wherein said literary work is a poem.

43. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said structured entity comprises a computer program.

44. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said structured entity comprises a musical composition.

45. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said structured entity comprises a biological organism.

46. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said structured entity comprises a computer data structure.

47. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said structured entity comprises an architectural structure.

48. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said structured entity comprises a chemical process.

49. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said response contains an input entered by using said first client device.

50. (Currently Amended) The non-transitory computer-readable medium of claim 49, wherein said input comprises filling in said at least one response template.

51. (Currently Amended) The non-transitory computer-readable medium of claim 49, wherein said input comprises linking said at least one response template to at least one part of said structured entity.

52. – 53. (Cancelled)

54. (Currently Amended) The non-transitory computer-readable medium of claim 35, wherein said input comprises at least one tag.

55. (Currently Amended) A non-transitory computer-readable medium having stored thereon a plurality of instructions, the plurality of instructions including instructions which, when executed by a processor, cause the processor to perform the steps comprising of:

- a) receiving a query pertaining to a structured entity having a plurality of parts;
- b) receiving a plurality of response templates for answering the query; and
- c) providing a response to an aggregating device from a first client device,

wherein said response comprises a completed response template linking one or more of said plurality of parts of said structured entity, the completed response template being selected from among the plurality of response templates by a user providing the response.

56. (Currently Amended) The non-transitory computer-readable medium of claim 55, further comprising the step of:

d) providing a response to the aggregating device from a second client device, wherein said response comprises a completed response template linking a plurality of parts of said structured entity.

57. (Currently Amended) The non-transitory computer-readable medium of claim 56, further comprising the step of:

e) requesting for an aggregated result of said responses from said first and second client devices.

58. (Currently Amended) The non-transitory computer-readable medium of claim 57, further comprising the step of:

f) receiving said aggregated result.

59. (Currently Amended) The non-transitory computer-readable medium of claim 56, further comprising the step of:

f) receiving said response of said first client device by said second client device.

60. (Currently Amended) The non-transitory computer-readable medium of claim 55, wherein said structured entity comprises a sequential multi-step process.

61. (Currently Amended) The non-transitory computer-readable medium of claim 55, wherein said structured entity comprises a literary work or a portion of a literary work.

62. (Currently Amended) The non-transitory computer-readable medium of claim 61, wherein said literary work is a poem.

63. (Currently Amended) The non-transitory computer-readable medium of claim 55, wherein said structured entity comprises a computer program.

64. (Currently Amended) The non-transitory computer-readable medium of claim 55, wherein said structured entity comprises a musical composition.

65. (Currently Amended) The non-transitory computer-readable medium of claim 55, wherein said structured entity comprises a biological organism.

66. (Currently Amended) The non-transitory computer-readable medium of claim 55, wherein said structured entity comprises a computer data structure.

67. (Currently Amended) The non-transitory computer-readable medium of claim 55, wherein said structured entity comprises an architectural structure.

68. (Currently Amended) The non-transitory computer-readable medium of claim 55, wherein said structured entity comprises a chemical process.

69. (Previously Presented) An apparatus for providing feedback, said apparatus comprising:

means for forwarding a query pertaining to a structured entity having a plurality of parts and for forwarding a plurality of response templates for answering the query; and

means for receiving a response from a first client device, wherein said response comprises a completed response template linking one or more of said plurality of parts of said structured entity, the completed response template being selected from among the plurality of response templates by a user of the first client device.

70. (Previously Presented) The apparatus of claim 69, wherein said means for receiving further receives a response from a second client device, wherein said response comprises a completed response template linking a plurality of parts of said structured entity.

71. (Original) The apparatus of claim 70, further comprising:

means for aggregating said responses from said first and second client devices to produce an aggregated result.

72. (Original) The apparatus of claim 71, wherein said forwarding means further forwards said aggregated result to said first client device or said second client device.

73. (Original) The apparatus of claim 70, wherein said forwarding means further forwards said response of said first client device to said second client device.

74. (Previously Presented) An apparatus for providing feedback, said apparatus comprising:

means for receiving a query pertaining to a structured entity having a plurality of parts and for receiving a plurality of response templates for answering the query; and

means for providing a response to an aggregating device from a first client device, wherein said response comprises a completed response template linking one or more of said plurality of parts of said structured entity, the completed response template being selected from among the plurality of response templates by a user of the apparatus.

75. (Previously Presented) The apparatus of claim 74, wherein said means for providing further provides a response to the aggregating device from a second client device, wherein said response comprises a completed response template linking a plurality of parts of said structured entity.

76. (Original) The apparatus of claim 75, further comprising:

means for requesting for an aggregated result of said responses from said first and second client devices.

77. (Original) The apparatus of claim 76, wherein said receiving means further receives said aggregated result.

78. (Original) The apparatus of claim 75, wherein said receiving means further receives said response of said first client device by said second client device.

79. (Previously Presented) A system for providing feedback, said system comprising:

a first client device; and

an aggregating device for forwarding a query pertaining to a structured entity having a plurality of parts and a plurality of response templates for answering the query to said first client device, where said aggregating device receives a response from said first client device, wherein said response comprises a completed response template linking one or more of said plurality of parts of said structured entity, the completed response template being selected from among the plurality of response templates by a user of the first client device.
